

Student Views History Use Case

(adapted by Pressman and Maxim, *Software Engineering: A Practitioner's Approach*, pp. 151-152, from Cockburn, A., *Writing Effective Use-Cases*, Addison-Wesley, 2001)

Use Case:	Student views history
Primary Actor:	Student
Goal in Context:	For the student to view general information about their past check-ins
Preconditions:	Student must have appropriate email and password; system is fully configured
Trigger:	Student decided to look at their history
Scenario:	<ol style="list-style-type: none">1. The student logs onto application with husky email and password2. The system displays buttons with major functions3. The student selects "View History" from the buttons4. The system displays each location the student has checked-in at with the associated number of check-ins5. The student selects a button to exit the "View History" screen
Exceptions:	<ol style="list-style-type: none">1. Login fails because email and/or password is incorrect, see use case <i>Student Log In</i>
Priority:	Moderate priority, to be implemented after student check-in functions
When available:	First release
Channel to actor:	Via mobile device browser
Secondary Actor:	System administrator, student's peer leader
Channels to Secondary Actors:	System administrator and peer leader – through PC or mobile device browser
Open Issues:	How should the locations be organized?
