Admin Log In Use Case

(adapted by Pressman and Maxim, Software Engineering: A Practitioner's Approach, pp. 151-152, from Cockburn, A., Writing Effective Use-Cases, Addison-Wesley, 2001)

Use Case:	System administrator logs in on a PC
Primary Actor:	System administrator
Goal in Context:	For the admin to log into the system
Preconditions:	System is fully configured
Trigger:	The admin wants to use the system
Scenario:	1. The admin opens the application 2. The system displays email and password fields and a login button 3. The admin types in their northeastern email 4. The admin types in their password associated with the account 5. The admin selects "Login" 6. The system displays the main page for administrators
Exceptions:	1. Login fails because email and/or password is incorrect – system displays appropriate error 2. Admin doesn't input an email or password – system displays appropriate error
Priority:	High priority
When available:	First release
Channel to actor:	Via PC desktop browser
Secondary Actor:	Student, student's peer leader
Channels to Secondary Actors:	Student and peer leader – through PC or mobile device browser
Open Issues:	1. How many attempts should students be given? 2. Should there be a function to reset the password?
